-!- FUNCTION: TETANUS TOXIN ACTS BY INHIBITING NEUROTRANSMITTER
RELEASE. IT BINDS TO PERIPHERAL NEURONAL SYNAPSES, IS INTERNALIZED
AND MOWES BY RETROGRADE TRANSPORT UP THE AXON INTO THE SPINAL CORD
WHERE IT CAN MOVE BETWEEN POSTSYNAPTIC AND PRESYNAPTIC NEURONS. IT
INHIBITS NEUROTRANSMITTER RELEASE BY ACTING AS A ZINC
ENDOPPETIDASE THAT CATALYZES THE HYDROLYSIS OF THE 76-GLN-|-PHE-777
                                                                                                                                                                                                                                                                                                                                                                                SUBUNIT: THE PRECURSOR POLYPEPTIDE IS SUBSEQUENTLY CLEAVED TO YIELD SUBCHAINS L AND H. THESE REMAIN LINKED BY A DISULFIDE BRIDGE AND ARE NON-TOXIC AFTER SEPARATION.

MISCELLANEOUS: THE C-TERMINAL OF THE HEAVY CHAIN BINDS TO
                                                                                                                                                                                                                                                                                                                                                                                                                                          GANGLIOSIDE RECEPTORS.
SIMILARITY: BELONGS TO PEPTIDASE FAMILY M27 (ZINC
METALLOPROTEASE); ALSO KNOWN AS THE TETANUS/BOTULINUM NEUROTOXIN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Hydrolase; Metalloprotease; Zinc; Plasmid;

"Duplication of the pepF gene and shuffling of DNA fragments on the "Duplication of the pepF gene and shuffling of DNA fragments on the lactose plasmid of Lactosoccus lactis.";
J. Bacteriol. 179:4164-417(1997).
-i. FUNCTION: HYDROLYZES PEPTIDES CONTAINING BETWEEN 7 AND 17 AMINO ACIDS WITH A RATHER WIDE SPECIFICATY.
-i. COFACTOR: BINDS ONE ZINC ION (BY SIMILARITY).
-i. SIMILARITY: BELONGS TO PEPTIDASE FAMILY M3 (ZINC METALLOPROTEASE);
ALSO KNOWN AS THE THIMET OLIGOPEPTIDASE SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

                                                                                                                                                                                                                                                        Ohkubo S., Muto A., Kawauchi Y., Yamao F., Osawa S.;
"The ribosomal protein gene cluster of Mycoplasma capricolum.";
Mol. Gen. Genet. 210:314-322(1987).
-!- FUNCTION: THIS SHALL UBIOUTTOUS ENZYME IS ESSENTIAL FOR MAINTENANCE AND CELL GROWTH.
-!- CATALYTIC ACTIVITY: ATP + AMP = ADP + ADP.
-!- SUBUNIT: MONOMER (BY SIMILARITY).
-!- SUBURILALIAR LOCATION: CYTOPLASMIC.
-!- SIMILARITY: BELONGS TO THE ADENYLATE KINASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
